Professional Summary

- Results-driven Senior Software Engineer and AI Consultant with 5+ years of hands-on experience building next-generation Agentic AI solutions, autonomous AI agents, LLM-based systems, and advanced RAG-driven architectures. Deep expertise in LangChain, LangGraph, AutoGen, Crew AI, and Azure OpenAI, with a proven track record of designing scalable, explainable, and stateful AI systems that drive measurable business outcomes.
- Demonstrated expertise in architecting end-to-end intelligent systems, including RAG-based pipelines with Vector Databases, multi-agent orchestration frameworks, and self-learning agent ecosystems. Adept at mentoring engineering teams, driving technical excellence, and delivering enterprise-grade AI solutions aligned with strategic business goals.
- Proficient in Microsoft 365 ecosystem integrations, Azure DevOps CI/CD pipelines, and Agile/Scrum methodologies. Strong communicator and senior-level consultant with a track record of leading cross-functional teams, translating complex AI concepts into actionable strategies, and collaborating with stakeholders to build scalable, production-ready AI-powered products.

Tech stack

Frontend Development: React.js, Next.js, TypeScript, JavaScript (ES6+), Redux, Redux Toolkit, HTML5, CSS3, Tailwind CSS, ShadCN

Backend & Databases: Node.js, Express.js, .NET Core, GraphQL, REST APIs, Prisma, Zod, Strapi, MongoDB, PostgreSQL

AI, LLM & Agentic Systems: LangChain, LangGraph, AutoGen, Crew AI, Azure OpenAI, OpenAI API, RAG Pipelines, Vector Databases (Pinecone, ChromaDB, Weaviate), LlamaIndex, Semantic Kernel, Hugging Face, Prompt Engineering, Agentic AI, Multi-Agent Systems

Cloud, DevOps & Version Control: AWS, Azure, Azure DevOps, Docker, Vercel, Git, GitHub, CI/CD, Webhooks

Microsoft 365 & Enterprise Integrations: SharePoint, Microsoft 365, Stripe, Clerk

Methodologies: Agile, Scrum

Professional Experience

2022/05 – present
Ahmedabad, India

Senior AI Consultant & Full-Stack Engineering Lead
BrainerHub Solutions

- Spearheaded the design and development of next-generation Agentic AI systems and LLM-based solutions using LangChain, LangGraph, and Azure OpenAI, leading a cross-functional team of 5+ engineers through end-to-end delivery of enterprise-grade AI applications within Agile/Scrum frameworks.

- Architected scalable RAG-driven pipelines integrating Vector Databases (Pinecone, ChromaDB) with Azure OpenAI, enabling intelligent document retrieval and context-aware AI responses. Designed stateful, explainable multi-agent orchestration workflows using AutoGen and Crew AI to automate complex business processes.
- Architected and delivered a Microsoft Teams plugin (External User Manager) leveraging React.js, .NET Core, Azure DevOps, and Microsoft Graph APIs, enabling enterprise tenant administrators to manage external guest access across Microsoft 365 at scale.
- Designed and implemented scalable RESTful APIs and intelligent backend services integrating third-party platforms (payment gateways, cloud services), while driving prompt engineering initiatives and optimizing LLM-based system performance for production environments.
- Served as a senior technical consultant, translating complex AI and business requirements into actionable architectural strategies, mentoring junior engineers in best practices for LLM integration, and collaborating with C-level stakeholders to align AI roadmaps with organizational goals.

2022/06 – 2022/07
Bhubaneshwar, India

Software Developer Intern - MERN Stack
UNICOMPILER

- Completed 2 full-stack web development projects using the MERN stack (MongoDB, Express.js, React.js, Node.js) within defined timelines, demonstrating strong foundational skills in component-based architecture, RESTful API integration, and npm package management.
- Actively collaborated with senior engineers, participated in structured code reviews, and contributed to key feature development, building a strong technical foundation that later evolved into expertise in LLM-based systems, Agentic AI frameworks, and enterprise-scale application architecture.

2021/02 – 2022/05
Remote

Full-Stack Developer (MERN) - Freelance
Upwork , Labanya Pharmaceuticals

- Independently architected and delivered a full-stack e-commerce platform for Labanya Pharmaceuticals using the MERN stack (MongoDB, Express.js, React.js, Node.js), integrating product catalog management, AI-driven search functionality, and online ordering with real-time inventory tracking.
- Built and deployed a college administration web application featuring user registration, complaint management, and query tracking modules, streamlining administrative workflows and reducing manual processing time by 40%.
- Managed end-to-end project delivery as an independent AI and full-stack consultant on Upwork, overseeing requirements gathering, technical architecture, client communication, and delivery across multiple concurrent projects within agreed timelines and budgets.

Projects

2024/01 – Present

External User Manager

A plugin for Microsoft Teams

Designed and developed a Microsoft Teams plugin enabling enterprise tenant administrators to manage external users and guest accounts across Microsoft 365 groups, strengthening access control and security governance.

- Built a centralized admin dashboard in React.js for tenant admins to view, search, and audit external/guest users across Microsoft 365 groups and Teams
- Integrated Microsoft Graph API to retrieve and manage tenant-level guest data, including invite status and group memberships
- Implemented role-based access controls so only authorized admins could approve, modify, or revoke external user permissions
- Built guest lifecycle workflows (invite, review, approval, removal) to streamline offboarding of inactive or unauthorized accounts

- Developed secure REST endpoints in .NET Core, consumed by the React front end, with SharePoint REST API integration for document-level permission checks
- Set up Azure DevOps CI/CD pipelines for automated build, test, and release across dev, staging, and production environments

Tech Stack: React.js, .NET Core, Azure DevOps, SharePoint REST APIs, Microsoft Graph API, Microsoft 365

2026/03 – 2026/08

AgentHire

Autonomous AI Job Application Agent

An autonomous AI agent that discovers real job openings and freelance opportunities, evaluates fit, finds hiring contacts, and manages outreach, built and iterated using Claude Code through structured agentic development sessions.

- Built a multi-source job discovery pipeline aggregating listings from six sources (HackerNews, Cutshort, Himalayas, Jobicy, RemoteYeah, We Work Remotely) with per-domain rate limiting and robots.txt compliance
- Implemented an LLM-based fit-scoring system (Grok/Gemini) that rates each opportunity 0 to 100 against a candidate profile before any outreach occurs
- Integrated Hunter.io Domain Search for automated hiring-contact discovery, with a confidence-threshold gate that separates high-confidence auto-send from human-reviewed contacts
- Built a verified sending pipeline with reply tracking via IMAP, including email/domain/subject-line matching for reliable response detection
- Designed the system with isolated per-source failure handling so a single broken data source never blocks the rest of the pipeline
- Deployed on a self-managed DigitalOcean droplet using PM2 process management, Caddy reverse proxy, and SQLite, with a Next.js admin dashboard and a public-facing showcase page

Tech Stack: Node.js, Next.js, SQLite, PM2, DigitalOcean, Groq, Gemini, Hunter API, Apify, Caddy

2026/01 – 2026/04

Githancer

Git timeline management platform

Built a full-stack Git timeline management platform for internal developer teams.

Githancer helps developers maintain realistic commit histories across personal repositories alongside private client work.

- Designed and built a PNPM monorepo with NestJS backend, Next.js dashboard, and a published Node.js CLI (githancer-cli on npm)
- Implemented 5 scheduling algorithms (linear, random, sprint, human-like, team mode) with 100% test coverage in the scheduler package
- Built GitHub OAuth 2.0 authentication, JWT session management, and a CLI API key system with bcrypt-hashed storage
- Developed a zero-friction CLI setup flow: timeline init opens the browser automatically, receives credentials via local HTTP server, and configures the project in one command
- Integrated Anthropic AI API for commit message suggestions with Accept / Edit / Skip interactive flow
- Deployed backend on Railway with PostgreSQL, frontend on Vercel with custom domain (githancer.nihardev.com), and published CLI to npm
- Set up GitHub Actions CI/CD pipeline with automated testing (42 scheduler tests, 29 backend tests) and deployment workflows
- Added AI workflow detection: automatically injects commit rules into Claude Code, Cursor, Copilot, and Aider configurations

Tech Stack: NestJS, Next.js, TypeScript, PostgreSQL, TypeORM, Node.js, Docker, Railway, Vercel, GitHub Actions, Anthropic API

2023/08 – 2023/12

Mindmap & Strenger

Plugins for Microsoft Teams

Developed two Microsoft Teams plugins - Mindmap, an AI-powered mind-mapping tool for Scrum meeting ideation, and Strenger, a SharePoint-integrated inventory and supply-tracking application - enabling teams to customize workflows and improve documentation management.

- Built Mindmap using the MindElixir library for real-time collaborative mind maps directly inside Teams meetings
- Designed brainstorming boards for sprint planning and retrospectives, letting members add, group, and prioritize ideas during ceremonies
- Developed Strenger as a SharePoint-integrated inventory app, using SharePoint REST APIs to sync stock levels and supply requests
- Built both plugins on a shared Node.js/.NET Core backend with React.js front ends, packaged via the Microsoft Teams SDK
- Added configurable workflow templates so teams could tailor board layouts (Mindmap) and inventory categories (Strenger) to their processes

Tech Stack: Node.js, React.js, .NET Core, MindElixir, SharePoint REST APIs, Microsoft Teams SDK

Awards

2025/05/09

Emerging Team Lead

BrainerHub Solutions

Recognized as the Emerging Team Lead at BrainerHub Solutions for outstanding senior-level leadership in managing cross-functional engineering teams, spearheading Agentic AI and LLM-based initiatives, successfully delivering multiple concurrent enterprise-grade projects on time, and consistently maintaining exceptional code quality and architectural standards.

2024/01/05

Best Performer of the Team

BrainerHub Solutions

Awarded Best Performer of the Team at BrainerHub Solutions for exceptional technical contributions as a senior consultant and engineering lead, delivering a complex, mission-critical client project with precision, meeting tight deadlines, and producing a high-quality AI-integrated solution that significantly exceeded client expectations and business outcomes.

Education

2019/07 – 2023/03

B.tech (Electrical)

Berhampur, India

National Institute of Science and Technology

2017/04 – 2019/03

Senior Secondary Education

Berhampur, India

Sankalp Senior Secondary School

Certificates

Front-End Web Development with React

I learnt React basics, React Router, Single page applications, React forms and Redux

Java Programming

I learnt about Java basics, Threading, Collections, Exceptions, JVM, JDBC, JPA, Swing.

Soft Skills

- Leadership
- Team Collaboration
- Excellent Communication & Presentation
- Problem Solving
